CURRENT RESEARCH PROJECTS

- China's outward foreign direct investments and impact on the world economy.
- Energy security and environmental protection in China.
- Corporate social responsibility of Chinese listed companies.
- *Labour mobility and urbanization in Western China*, Funded by the Chinese National Social Foundation.
- *Reforms of state-owned commercial banks in China*. This is funded by a Leverhulme Trust research grant for two years from 2005 to 2007. It aims to investigate how current reforms of state commercial banks will change their performance and efficiency as compared to non-state banks, including private and foreign invested banks in China.
- *EU-China Financial Services Co-operation Project*, this is a large multi-national cooperation project to study the incentives of foreign banking investing in China under the WTO agreement and a comparative study to compare the performance between Chinese and major foreign banks in the EU. Experts are invited from China (9), Germany (3) and the UK (6) for work for a period of nine months from March to November 2006. I am leader of a small subject team of 3 experts based in London but we have to spend up 20 days in China. My team is responsible for a comparative study on the technical and financial efficiency of Chinese and European banks.
- *Impact assessment and monitoring mechanism for the EU-China ADS tourism agreement*. This project is to investigate how the Approved Destination Status (ADS) given by the European States to Chinese tourists may affect the economies in both China and the EU and how this agreement may also lead to some potential immigration risk imposed on the EU states. I am leader of a team of four different European experts from the UK, France and China. A 90-pages technical report has been produced to the European Commission. This report sets a useful policy foundation for the next stage of tourism development between China and the EU. The consultancy report has provided rich materials for academic publications in the next stage of research.
- *Measuring rural poverty in China*. This is funded by a Canadian International Development Research Centre grant for two years from 2005 to 2006. This is jointly conducted between Middlesex and a group of researchers in the China Agricultural University in Beijing.
- *Foreign direct investment (FDI) and regional economic growth in China*. This project is funded by an internal research grant from 2003 to 2007. It aims to study how FDI influences economic growth in China and how income inequality may have been induced by economic growth, FDI and exports.
- *Economic growth and accession to WTO within a framework of a computable general equilibrium model*. It will investigate how openness induced by WTO accession may have led to a structural change in the Chinese economy and how such a change may affect income distribution and poverty reduction.

- *Income inequality and poverty*. This is supported an internal research grant with two full-time Ph.D students working in this programme. Large rural and urban household survey data from China have been collected to study how economic growth may have led to a divided nation, and how such a divided nation affects the efforts of government to reduce poverty.
